## 1 Basic properties

1. A circle is a set of points with equal distance from a fixed point.
  - (a) Let  $A, B, C$  be three points on this circle. Prove that  $2\angle BAC = \angle BOC$ .
  - (b) In particular, show that the angles on a semicircle is  $90^\circ$ .
  - (c) Let  $DE$  be a chord with  $M$  as its midpoint. Show that  $OM \perp DE$ , where  $O$  is the centre.
  - (d) Show that if  $ABCD$  is a cyclic quadrilateral, then  $\angle BAC = \angle BDC$ .
  - (e) Show that  $\angle ABC + \angle ADC = 180^\circ$ .
  - (f) Let  $AC$  and  $BD$  intersect at  $X$ . Show that  $AX \times CX = BX \times DX$ .
  - (g) Let  $AD$  and  $BC$  intersect at  $Y$ . Show that  $YA \times YD = YC \times YB$ .
  - (h) Let  $T \in BC$  such that  $AT$  is a tangent. Show that  $\angle TAB = \angle BCA$ .
  - (i) Show that  $TA^2 = TB \times TC$ .
  - (j) Show that (d) to (g) are all if and only if conditions. I.e. if  $ABCD$  satisfies those conditions, then  $ABCD$  is cyclic.

## 2 Problems

1. Show that the midpoint of the hypotenuse of a right angled triangle is the circumcentre of the triangle.
2. (Shadow theorem) Let  $\triangle ABC$  have  $\angle BAC = 90^\circ$  and  $D \in BC$  such that  $AD \perp BC$ . Show that
  - (a)  $AB^2 = BD \times BC$
  - (b)  $AC^2 = CD \times CB$
  - (c)  $AD^2 = BD \times CD$
  - (d) Hence or otherwise prove the pythagorean theorem.
3. Let  $X$  be outside circle  $\omega$  with centre  $O$  and let  $P, Q \in \omega$  such that  $PX, QX$  are tangents. Let  $PQ \cap OX = K$ . Let  $A, B \in \omega$  such that  $X, A, B$  is collinear. show that  $ABKO$  is cyclic.

4. Let two circles  $\alpha, \beta$  intersect at  $X, Y$ . Let  $A \in \alpha$  and  $B \in \beta$  such that  $AB$  is a common tangent. Show that  $XY$  meets  $AB$  at  $M$ , where  $M$  is the midpoint of  $AB$ .
5. Let  $A, B$  be two points on a circle. Let  $TA, TB$  be tangents to the circle. Let  $C$  be another point on the circle such that  $BC \parallel TA$ . Let  $TC$  meet the circle again at  $D$ . Let  $BD$  meet  $TA$  at  $M$ . Show that  $TM = MA$ .
6. (Spiral sym) Let two circles  $\alpha, \beta$  meet at points  $X, Y$ . Let  $A, C \in \alpha$  and  $B, D \in \beta$  such that  $AXB$  and  $CXD$  are collinear.
  - (a) Show that  $\triangle YAB \sim \triangle YCD$ .
  - (b) Show that  $\triangle YAC \sim \triangle YBD$ .
  - (c) Let  $AM = BM$ . Let  $CN = DN$ . Show that  $\triangle YAC \sim \triangle YMN$ .
  - (d) Let  $AC$  intersect  $BD$  at  $Z$ . Show that  $YAZB$  is cyclic. Show that  $YCZD$  is cyclic.
7. (Incentre lemma) Consider  $D$  on the midpoint of the arc of  $BC$  not containing  $A$ . Show that  $DB = DC = DI = DJ$ , where  $I$  is the incentre and  $J$  is the excentre of triangle  $ABC$ .
8. (Angle bisector lengths) Let  $D$  be the midpoint of the arc  $BC$  not containing  $A$ . Let  $AD \cap BC = X$ . Show that  $DB^2 = DC^2 = DX \times DA$ . Also show that  $AB \times AC = AX \times AD$ .
9. (Shooting lemma) Consider  $D$  on the midpoint of the arc of  $BC$  not containing  $A$ . Choose any two points  $X, Y$  on the circle. Let  $DX, DY$  meet line  $BC$  at points  $P, Q$ . Show that  $XPYQ$  is cyclic.
10. (Dilation) Let two circles  $\alpha, \beta$  be tangent at point  $T$ . Let  $A, C \in \alpha$  and  $B, D \in \beta$  such that  $ATB$  and  $CTD$  are collinear. Show that  $AC \parallel BD$ .
11. (Dilation) Let two circles  $\alpha, \beta$  be tangent at point  $T$ . Let  $A \in \alpha$  and  $B \in \beta$  such that  $A, T, B$  are collinear. Let the tangent at  $A$  intersect  $\beta$  at  $X, Y$ . Show that  $BX = BY$ .
12. (Nine point circle) Let  $D, E, F$  be midpoints of  $BC, CA, AB$  of  $\triangle ABC$ . Let  $X \in BC, Y \in CA, Z \in AB$  such that  $AX, BY, CZ$  are altitudes of the triangle. Let  $P, Q, R$  be midpoints of  $AH, BH, CH$ . Show that  $DEFXYZPQR$  all lie on one circle.
13. (Simson line) Let  $ABCD$  be a cyclic quadrilateral. Let  $E, F, G$  be on lines  $AB, BD, DA$  such that  $AB \perp CE, BD \perp CF, AD \perp CG$ . Show that  $E, F, G$  are collinear.
14. (2025 Dec prep G6) Triangle  $ABC$  has circumcentre  $O$  and satisfies  $AC = 2AB$ . The bisector of  $\angle BAC$  intersects side  $BC$  at  $D$ . Let  $E$  be the foot of the perpendicular from  $O$  to line  $AD$ . Let  $F \neq D$  be a point on line  $AD$  such that  $CD = CF$ . Prove that  $\angle EBF = \angle ECF$ .
