

# Harmonic points

Jongmin Lim

November 16, 2025

**Definition.**  $A, X, B, Y$  are harmonic points on a line if  $AX/BX = AY/BY$ .

## 1 Properties

1. Let  $K$  be a point in the interior of  $\triangle PAB$ . Let  $PK, AK, BK$  intersect  $AB, PB, PA$  at  $X, Q, R$ . Let  $QR$  intersect  $AB$  at  $Y$ . Show that  $A, X, B, Y$  are harmonic.
2. (Harmonic quadrilateral) Let  $\triangle AXY$  have circumcircle  $\omega$ . If the tangents at  $X, Y$  to  $\omega$  intersect at  $T$ , and  $AT$  intersects  $\omega$  again at  $B$ , show that  $A, X, B, Y$  are harmonic, that is,  $AX/BX = AY/BY$  (line segment lengths). Show that  $AB$  is a symmedian of  $\triangle AXY$ .
3. If  $A, X, B, Y$  are harmonic points and if  $M$  is the midpoint of  $XY$ ,
  - (a) Show that  $XM^2 = MA \times MB$ .
  - (b) Show that  $AX \times AY = AB \times AM$ .
  - (c) Show that  $BX \times BY = BA \times BM$ .
  - (d) Show that the converses hold.
4. Let  $A$  be a point outside of circle  $\omega$ . Let  $S, T, X, Y \in \omega$  such that  $AS, AT$  are tangents to  $\omega$  and  $A, X, Y$  are collinear. Let  $AY \cap ST = B$ . Show that  $A, X, B, Y$  are harmonic. (i.e. the *pole* of  $A$  is the locus of the point that is harmonic with  $X, Y$  as  $A, X, Y$  varies as a secant).
5. (Harmonic pencil) Let  $A, X, B, Y$  be harmonic points on line  $\ell_0$  and let  $J$  be a point not on the line.
  - (a) Show that the value  $c = (AX/BX)/(AY/BY)$  is independent of the lengths  $JA, JX, JB, JY$ , but only on the angles  $\angle AJX, \angle XJB, \angle BJY$ .
  - (b) Draw another line  $\ell_1$  such that  $AJ, XJ, BJ, YJ$  meets  $\ell_1$  at  $A_1, X_1, B_1, Y_1$ . Show that  $A_1, X_1, B_1, Y_1$  are harmonic.
  - (c) Let  $\Gamma$  be a circle passing through  $J$ . Let  $AJ, BJ, XJ, YJ$  meet the circle at  $A_2, X_2, B_2, Y_2$ . Then  $A_2, X_2, B_2, Y_2$  are harmonic, that is,  $A_2X_2/B_2X_2 = A_2Y_2/B_2Y_2$  (line segment lengths).
6. Consider triangle  $PAB$  and let  $X$  be the midpoint of side  $AB$ . Let  $PY \parallel AB$ . Show that  $PA, PB, PX, PY$  is a harmonic pencil.

7. Let  $A, X, B, Y$  be harmonic and let  $A', B', C', D'$  be the image of the inversion with centre  $P$  with some radius. Show that  $A', B', C', D'$  is harmonic under the following conditions:
- $A, X, B, Y$  is harmonic on a line, and  $P$  is not on the line.
  - $A, X, B, Y$  is harmonic on a line, and  $P$  is on the line.
  - $A, X, B, Y$  is harmonic on a circle, and  $P$  is not on the circle.
  - $A, X, B, Y$  is harmonic on a circle, and  $P$  is on the circle.

## 2 Problems

- Let  $\triangle ABC$  be an isosceles triangle with  $AB = BC$  and circumcircle  $\omega$ . Let the tangents to  $\omega$  at  $B, C$  intersect at  $T$ . Let  $AT$  intersect  $\omega$  at  $X$ . Show that  $CX$  bisects  $BT$ .
- (USAJMO 2011) Let  $A, B, C, D, E$  lie on circle  $\omega$  such that the tangents to  $\omega$  at  $B$  and  $D$  intersect at  $P$ , and  $P, A, C$  are collinear, and  $DE \parallel AC$ . Show that  $BE$  bisects  $AC$ .
- Let  $ABC$  be a triangle and let the tangents at  $B, C$  meet at point  $X$ . We also have  $XB \parallel AC$ . Let  $AX$  meet the circle again at point  $D$ . Let  $BD \cap AC = E$ . Show that  $AC = CE$ .
- (2021 Dec prep G7) Let  $M$  be the midpoint of side  $BC$  of  $\triangle ABC$ . The circle with centre  $M$  and radius  $AM$  intersects  $AB, AC$  again at  $P, Q$ . The tangents to this circle at  $P, Q$  intersect at  $D$ . Show that the perpendicular bisector of  $BC$  bisects  $AD$ .
- (USA TST 2011) Let  $\triangle ABC$  be an acute triangle with altitudes  $AD, BE, CF$  and  $H$  as the orthocentre. Let  $P, Q \in EF$  such that  $AP \perp EF$ ,  $HQ \perp EF$ . Let  $DP \cap QH = R$ . Show that  $HQ = HR$ .
- (APMO 2013) Let  $ABCD$  be a quadrilateral inscribed in a circle  $\omega$ , and let  $P$  be a point on the extension of  $AC$  such that  $PB$  and  $PD$  are tangent to  $\omega$ . The tangent at  $C$  intersects  $PD$  at  $Q$  and the line  $AD$  at  $R$ . Let  $E$  be the second point of intersection between  $AQ$  and  $\omega$ . Prove that  $B, E, R$  are collinear.
- Let  $\triangle ABC$  have incircle  $\gamma$  touch sides  $BC, CA, AB$  at  $D, E, F$  respectively. Let  $EF \cap BC = X$ ,  $DF \cap AC = Y$ ,  $DE \cap AB = Z$ . Let the midpoint of  $XD, YE, ZF$  be  $L, M, N$ . Show that  $L, M, N$  collinear.
- Let  $ABCD$  be a quadrilateral with an inscribed circle  $\omega$  which is tangent to the sides  $AB, BC, CD, DA$  at points  $P, Q, R, S$  respectively. We want to show that  $AC, BD, PR, QS$  meet at one point.
  - Let  $PR \cap QS = X$ . Let  $CX$  meet the circle again at points  $G$  and  $H$ . Show that  $QGRH$  a harmonic quadrilateral.
  - Describe an inversion which maps  $P \rightarrow R, Q \rightarrow S$ .
  - Show that  $A, C, G, H$  collinear.

9. (The Big Diagram) Let  $ABCD$  be a cyclic quadrilateral on circle  $\omega$  with centre  $O$ .  $AB \cap CD = X$ ,  $AD \cap BC = Y$ ,  $AC \cap BD = Z$ . Let  $K$  be the inversion of  $Z$  over  $\omega$ .
- (a) Hence show that  $Y$  is the pole of  $XZ$ .
  - (b) Hence show that  $XY$  is the pole of  $Z$ .
  - (c) Show that  $BODK, AOCK$  is cyclic.
  - (d) Show that  $XADK, XBCK, YKAB, YKDC$  cyclic.
  - (e) Show that  $K$  is the Miquel point of  $ABCD$ .
10. Let  $ABCD$  be a quadrilateral with an inscribed circle  $\omega$  which is tangent to the sides  $AB, BC, CD, DA$  at points  $P, Q, R, S$  respectively.
- (a) Show that  $AC, PQ, RS$  concurrent. Show that they concur at the pole of  $BD$ .
  - (b) Let  $PR \cap QS = Z$ . What is the polar of  $Z$ ?
  - (c) Hence prove again that  $AC, BD, PR, QS$  are concurrent.
11. (Butterfly theorem) Consider a cyclic quadrilateral  $ABCD$  on circle  $\omega$  and centre  $O$  and let  $AC \cap BD = Z$ . Choose a line  $\ell \perp OZ$  passing through  $Z$ . Let  $\ell \cap AD = P$ ,  $\ell \cap BC = Q$ . Show that  $PZ = QZ$ .
12. Let the circumcircle of  $\triangle ABC$  be  $\Gamma$ . Consider a circle  $\omega$  which is tangent to the circumcircle internally at  $T$  and sides  $AB$  and  $AC$  at  $X, Y$ . Let  $Z$  be the second intersection of the circumcircle of  $\triangle AXY$  and  $\Gamma$ . Show that  $ZTBC$  is a harmonic quadrilateral.
13. (ISL 2016 G2) Let  $ABC$  be a triangle with circumcircle  $\Gamma$  and incenter  $I$  and let  $M$  be the midpoint of  $\overline{BC}$ . The points  $D, E, F$  are selected on sides  $\overline{BC}, \overline{CA}, \overline{AB}$  such that  $\overline{ID} \perp \overline{BC}$ ,  $\overline{IE} \perp \overline{AI}$ , and  $\overline{IF} \perp \overline{AI}$ . Suppose that the circumcircle of  $\triangle AEF$  intersects  $\Gamma$  at a point  $X$  other than  $A$ . Prove that lines  $XD$  and  $AM$  meet on  $\Gamma$ .
